项目一: 基于人工智能的格林函数插值

(汤志航)

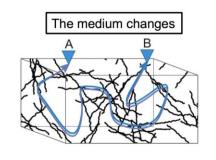

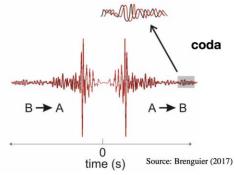

signal processing ==> A⊗B ==> stack ==>

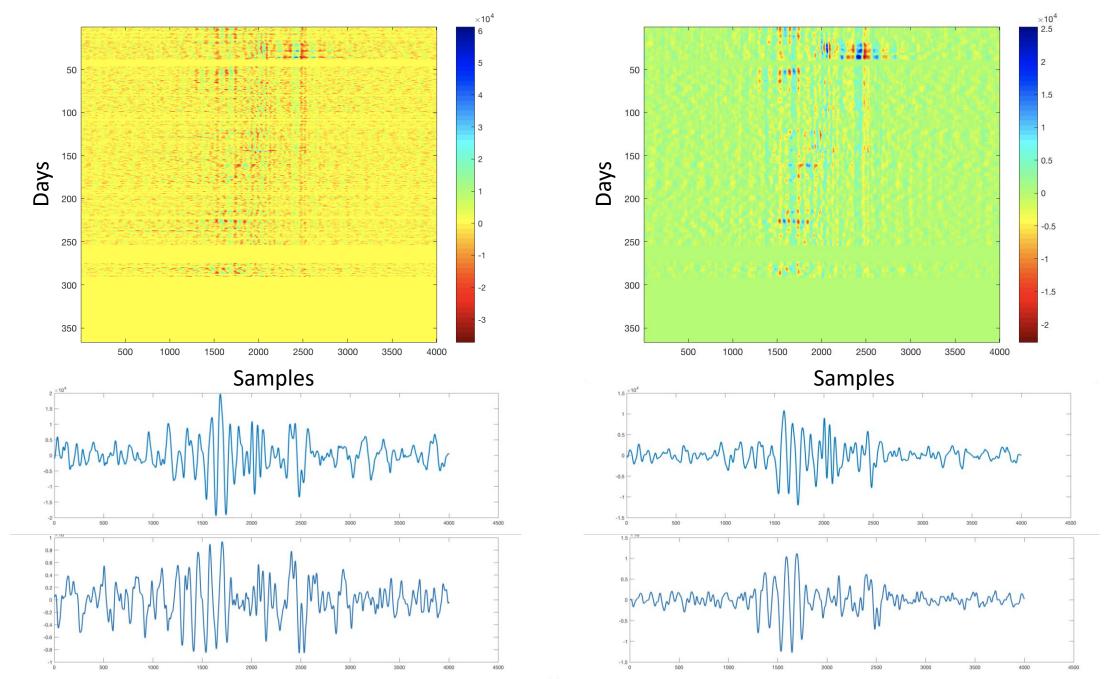

Campillo and Paul, Science, 2003; Shapiro and Campillo, GRL, 2004

Temporal changes of seismic wave velocity at depth ==> characterize the deformation rate?

Annual Green functions of one station pair

        fclose(newfile_fp);</pre>
```

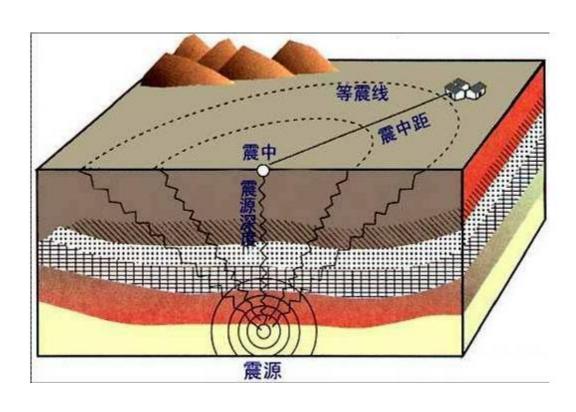

任务描述

- 1、对缺失日期的格林函数采用AI的方法进行插值,并至少和目前流行的一种插值算法进行对比,评价Ai方法的优缺点。
- 2、对每个台站对可采取独立插值或将空间位置信息约束考虑进去,对比两种方式的效果并评价。
- 3、几种插值方式结果综合评价之后给出最优方案。

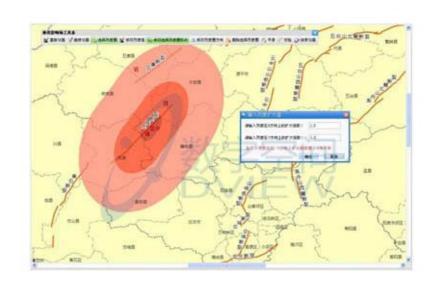

项目二: 基于人工智能的有限断层破裂实时监测

(赵伟驰)

背景介绍

点源 (震源机制解、地震经纬度、深度)

线源 (方向、长度)

地球物理方面: 建立模版库

在本项目中采用的地面震动预测方程如公式1所示,通过拟合上述筛选后的 波形数据建立川滇地区的地面震动预测方程。

$$\log Y = c_0 + c_1 M + c_2 M^2 + c_3 \log R + \sigma_{\text{inita}} + \sigma_{\text{inita}}$$
 (1)

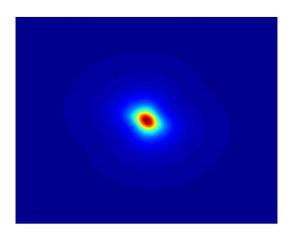

公式中,Y是地面震动幅值,可以是地面峰值速度(PGV)的幅值,可以是地面峰值加速度(PGA)的振幅,也可以是在给定频率时响应频谱加速度(PSA)的振幅。M表示地震的矩震级。R为有效点源距离(公式 2)。

$$R = \sqrt{R_{hypo}^2 + h_{eff}^2} \tag{2}$$

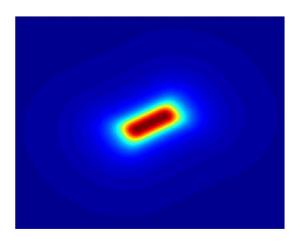

②根据区域地面震动预测方程,构建理论地震断层峰值加速度空间分布图数据库

在本项目中,拟定模板库中的最小断层长度为 $10 \, \mathrm{km}$,最大断层长度 $300 \, \mathrm{km}$,间隔 $5 \, \mathrm{km}$ 。断层走向为 $0 \, \mathrm{g}$ 至 $179 \, \mathrm{g}$,间隔 $1 \, \mathrm{g}$ 。由地面震动预测方程(公式 1)可知,PGA 的大小与地震量级与震源距离相关,通过公式 $3 \, \mathrm{g}$ 立起震级(M)与断层长度(L)之间的统计关系:

$$\log_{10}(L) = (M - 4.33)/1.49 \tag{3}$$

Mw_6.30_Angle_149_Length_18.07

Mw_7.15_Angle_59_Length_69.74

识别图片中断层的长度、方向

选择并测试网络结构

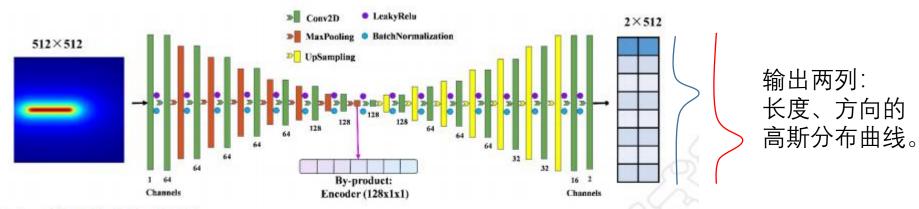

图 4 拟采用的神经网络结构。

任务描述

- 1、构建合适的数据训练网络(或测试几种网络择优)
- 2、实现数据训练
- 3、评价测试结果, 计算准确率、F1等评价标准
